(54) GRAPH DISPLAY CONTROLLER AND STORAGE MEDIUM

(57)Abstract:

PROBLEM TO BE SOLVED: To clearly present a selected parameter by displaying a graph showing one of the selected parameter while changing at least one part of the graph into a predetermined display form.

SOLUTION: A CPU 2 shows a state under tracing by making the display form of a numerical axis corresponding to a traced parameter into thick line display in accordance with the scan of a right or left move key of a user through radar chart trace processing and displays the value of a parameter corresponding to the numerical axis displayed with the thick line. Namely, the CPU changes the numerical axis corresponding to the value of a trace counter into the thick line display by incrementing the trace counter as a value showing the trace position of a radar chart when the moving to right is instructed by the right move key of an input part 3, and displays the value of the parameter corresponding to the numerical axis displayed with the thick line. When the moving to left is instructed by the left move key of the input part 3, similar processing is performed by decrementing the trace counter.
